SCREENSHOT:
Take a screenshot showing that you ran the make command and make build. Paste the screenshot in your Task document.
Add a target called tar: that will tar zip everything in the folder, your tar file should be test.tar.gz.
Add a target called untar: that will untar the tared test.tar.gz file.

Touch is a Linux/Unix command that is used to create an empty file with no content.
SCREENSHOT
Make a screenshot of this and copy/paste it in your Task document.
Note that the file MUST be named Makefile or makefile for the make command to identify it.
Makefile Targets and Dependencies
Makefiles are a form of bash script, which is like a programming language for controlling your Linux terminal. It
